

Sharing Best Practices for Energy Efficiency in Indian Data Centers

NASSCOM®

17th March 2009

Srinath Batni

Member of the Board of Directors, Infosys Technologies Ltd
Director and Head – Delivery Excellence

A rise of 7° C in average global temperatures
can render half the world unliveable

- Scientific Congress, 2009

THE TIME TO ACT IS NOW!!!

Climate change.
Natural resource exhaustion.
Eco-system collapse.

(Some of the most profound and long-term threats to peace & security in the 21st Century)

- WWF, September 2008

Developing countries could cut their energy demand growth by more than half through higher energy productivity

- McKinsey Global Institute Survey, 2009

ENERGY SAVED IS ENERGY GENERATED

Our biggest challenge today: Energy

Other key focus areas for addressing the climate challenge:

- Mobility
- Bio-diversity
- Water
- Waste Management

We are conscious of the impact a large and global operation has on the environment. We monitor the direct and indirect consequences of our operations and strive for continuous improvement.

We believe that being aware is important, but showing positive results is more important.

This, to us, is responsible business

PARTICIPATION IS THE KEY OF SUCCESS!!!

Thank You
